DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The exact structure of the claimed semiconductor device is not clearly defined.

In claim 1, a complete device is not described. Nor is the description of the insulating film clearly understood. The complete composition of the insulating film is not given. The recitation that this film contains silicon, "at least one kind of element other than silicon", and hydrogen atoms, fails to clearly define the novel, inventive structure.

In addition, the range of absorbance of infrared radiation at a range of wavelengths, coupled with the negative limitation concerning the application of an electric field, does not limit or define the structure of the claimed insulating layer in a way that can be clearly understood.

In claim 2, the structure of the device is not clearly defined. What are the "particular structures" that make up the device? What does it mean to have the absorption of the infrared radiation "derived from" the particular structures?

The claim 5 recitation is unclear as to the meaning of the phrase "each hydrogen atom in at least a part of the hydrogen atoms".

The quantitative variables recited in claims 8-11 are speculative in that a complete semiconductor device structure has not been fully defined.

Claims 13 and 14 fail to further define or limit the claimed structure.
